Sun-shading

Two types of realizations :

- rooftop : 324 photovoltaic modules
- facade : 449 photovoltaic modules for sun-shading application

The sun-shading canopy has been designed in order to be as light as possible for a better well-being of the residents :

- the study of the pv panels bearing carried out by 2ES leads to the minimization of the amount of mechanical supports,
- the cable routing is not visible
